Style B

3/32" Radius

Frames or Panels

Each of our specialty panels may be made as stand alone panels or as center panels within a frame

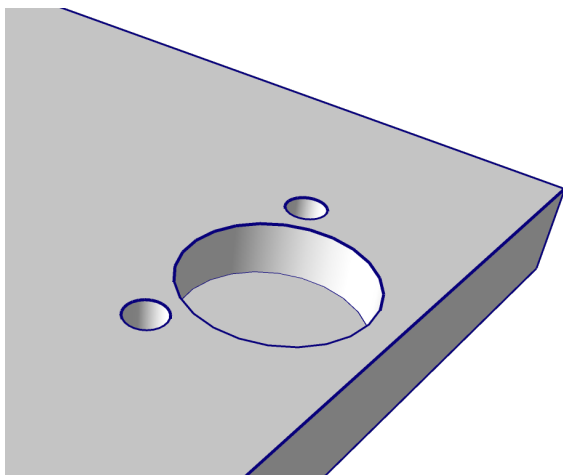

MULTIPLE OPENINGS

Up to 3 openings, vertically or horizontally. Equal or specified sizes.

All Stiles and Rails are individually customizable.

Hinge Drilling

Doors can be pre-drilled to accept hinges for any hinge cup diameter, with or without additional holes for dowel pins at any needed offset from top & bottom and with specified tab dimension.

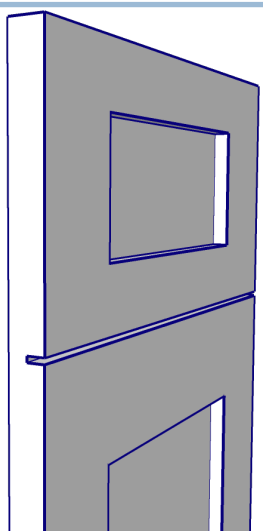

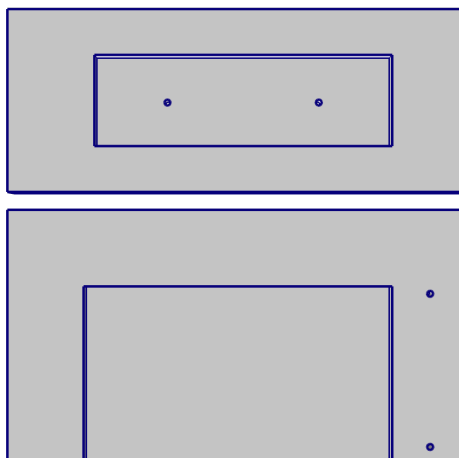

For doors over 42" tall, a 3rd hinge hole positioned on center is included by default. Specify if 3rd hinge is not needed. Add \$3.50 per door for hinge drilling option.

If your hinge offset from the top and bottom of the door is different, specify the swing direction for each door.

Hardware Drilling

Doors and drawer fronts can be pre-drilled for hardware at no cost for either knobs or any width pulls. Specify position for hardware for each door (position A, B, C, D, or E) and desired hardware offsets from the top and side edge. Wide drawer fronts can be drilled for two pieces of hardware – drawer fronts wider than 30" get drilling for two pieces by default (unless specified for one).

For false fronts for sinks, remember to turn off hardware drilling if not included as a standard.

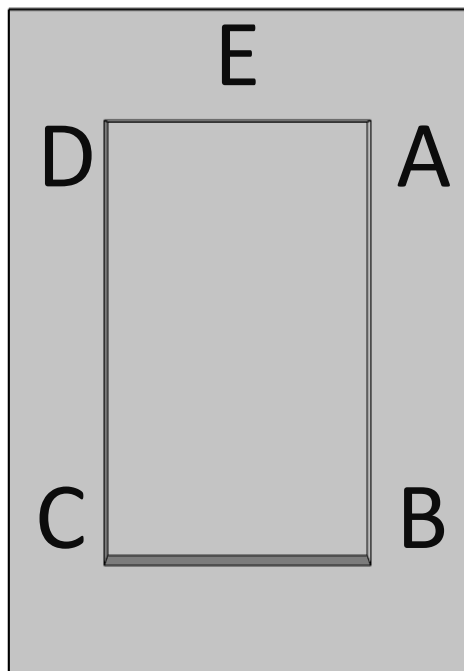

Dishwasher Panel

Drawer Front / Door Panel combinations are available for full front dishwasher panels. The drawer front and door is machined as one piece with a 1/8 kerf cut between the two to match full overlay reveals. This saves time for attaching the two fronts together and makes for an easier installation on the dishwasher.

(Cost for "DW Combo" front is \$10 plus the standard square foot cost.

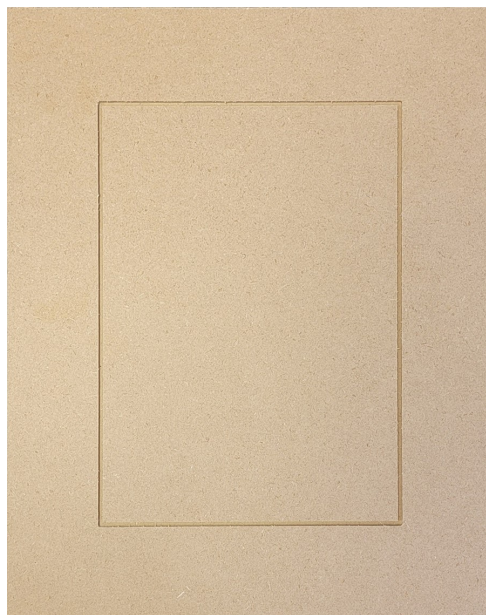

Hardware Locations

Specify which hinge location to use, and the offsets from the top/bottom and side edge.

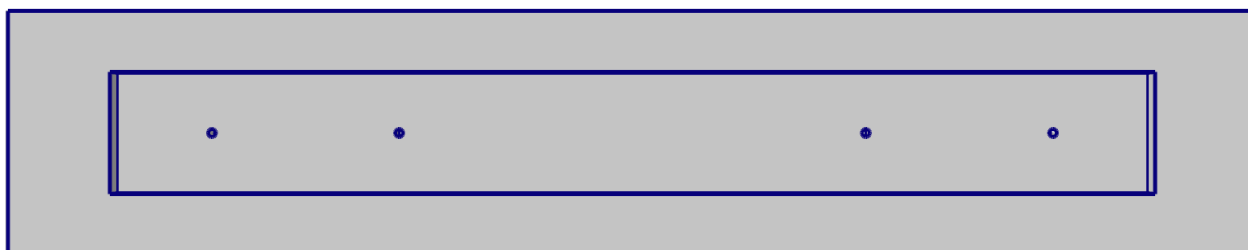

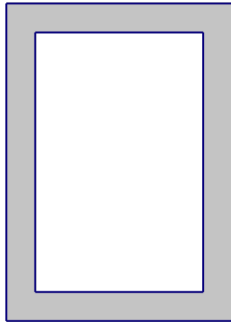

Back Route

An optional back route can be added to any 1 piece door to give the impression of a multi-piece door

DOOR FRAMES

Open panel doors can be made with or without a rabbet on the back side to accept a pane of glass. The frames can optionally be routed for gasket moulding with gasket included for an additional \$9 per door. (set for 1/8" glass thickness)

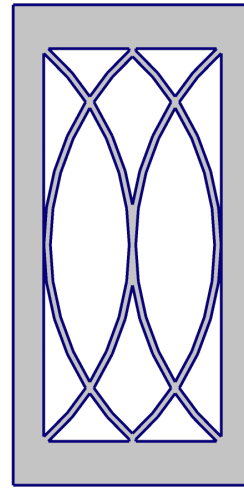

Frames can also be made without the rabbet for use for cabinet, micro, or oven frame.

Default mullion thickness is 5/8", and can be made thinner or thicker
